DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wanat or Rahman.

Wanat discloses a method of reacting a formaldehyde with one or more phenolic compounds, in the presence of an acid catalyst, such as oxalic acid catalyst (see col. 9, example 1 (See col. 9, lines 45-55) at temperature from 95-200 C under pressure.

Rahman discloses a method of producing a phenol novolak resin by reacting phenolic compounds with formaldehyde using an oxalic acid catalyst at 110-175 C under atmospheric pressure (see Example 1).

The disclosures of the references differ from the instant claims in that they do not disclose the claimed ortho-cresol, as in claim 3, to have the ortho ratio of 30% or more, as in claim 1.

However, they do disclose the use of phenolic compounds, in general, or more specifically, meta- and para-cresol, which are different forms of ortho-cresol. Therefore, it would have been obvious to one of ordinary skill in the art to select the ortho-cresol to replace the meta- and para-cresol of the references to react with formaldehyde under cited conditions to form the same products having the claimed ortho ratio of $\geq 30\%$

since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said selection.
